GMT elementary linear algebra howard anton pdf -

In linear algebra, an eigenvector or characteristic vector of a linear transformation is a non-zero vector that changes by only a scalar factor when that linear transformation is applied to it. Eigenvalues and eigenvectors - Wikipedia - In linear algebra, a column vector or column matrix is an $m \times 1$ matrix, that is, a matrix consisting of a single column of m elements, $\mathbf{v} = [v_1, \dots, v_m]^T$. Similarly, a row vector or row matrix is a $1 \times m$ matrix, that is, a matrix consisting of a single row of m elements $\mathbf{w} = [w_1, \dots, w_m]$. Throughout, boldface is used for the row and column vectors. Row and column vectors - Wikipedia -
