

molecular markers and marker assisted breeding in plants

Thu, 14 Feb 2019 23:14:00 GMT molecular markers and marker assisted pdf - Marker assisted selection or marker aided selection (MAS) is an indirect selection process where a trait of interest is selected based on a marker (morphological, biochemical or DNA/RNA variation) linked to a trait of interest (e.g. productivity, disease resistance, abiotic stress tolerance, and quality), rather than on the trait itself. Sat, 09 Feb 2019 22:37:00 GMT Marker-assisted selection - Wikipedia - A genetic marker is a gene or DNA sequence with a known location on a chromosome that can be used to identify individuals or species. It can be described as a variation (which may arise due to mutation or alteration in the genomic loci) that can be observed.
